hyperproliferative disorders (e.g. cancer), autoimmune disorders (e.g. systemic lupus erythematosus), neurological disorders (e.g. Alzheimmer's disease), inflammatory disorders (e.g. Crohn's disease), and viral infection (e.g. HTV). The CARD polypeptide, polypucleotide and an antibody which selectively binds to CARD can be used in screening
                                                                             and detection assays (e.g. chromosomal mapping, tissue typing), predictive medicine (prognostic assays, monitoring clinical trials, and therapy (treatment and prophylaxis). The CARD polypeptide may be used to screen for drugs that bind to and/or modulate it. CARD sequences are potential targets for requiating inflammation, cancer, NF-kappaB signalling, stress-related response and apoptosis in human disease. A host cell containing a polynucleotide encoding CARD can be used to
                                                                                                                                                                                                                                                                                                                                                        846 RPVVLLPECLAPRLIRNLLDLPSSRLDFQVCPAESLSGEELCPSSAPGAPKAQPATPGLG 905

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This is the amino acid sequence of the mouse guanylate kinase. The ger was isolated from a lambda-gt10 cDNA library of mouse 702/3 B lymphoma cells, using the corresp, human gene (AAT/17148) as a probe. The isolated gene fragment (800 bp) was cloned into pUC118. These proteins
          The present sequence is a human protein belonging to the dlg family (P-dig). P-dig is recognised by an antibody binding to the epitope: RECREPIXERDKYTORHSKE. The dlg family of proteins is involved in regulation of embryogenesis and in tumour suppression. P-dlg, and its associated polynucleotides and antibodies are useful in investigating mechanisms of tumour suppression and in the design and screening of potential anticancer agents.

The invention relates to the generation of novel H8V-1 thymadine kinase (TK) or GK genes with a mutation upstream, within or downstream from a DRH nucleoside binding site. The TK enzymes can be used for inhibiting abthogenic agents, e.g. tumours, hyperkeratosis, psoriasis, prostate hypertrophy, hyperthyroidism, endocrinopathies, autoimmune diseases, allergies, restenosis, viral diseases such as AIDS, hepatitis,
The HCGPF exhibits immune control and haematopietic control functions over a wide range and may be used in the fields of immunodeficient diseases, autoimmune diseases, infectious diseases, hepatitis, nephritis, cancers and bone marrow transplantation.

The invention relates to the generation of movel HSV-1 thymidine kinase (TK) or GK genes with a mutation upstream, within or downstream from a DRH nucleoside binding site. The TK enzymes can be used for inhibiting pathogenic agents, e.g. tumours, hyperkratosis, psoriasis, prostate hypertrophy, hyperthyroidism, endocrinopathies, autoimmune diseases, allergies, restenosis, viral diseases such as AIDS, hepatitis, intracellular parasitic diseases or bacterial infection.

Also claimed is a vector DNA capable of replication in prokaryptes and eukaryptes, the transformed prokaryptes and eukaryptes and a polypeptide having HCGPF activity. The HCGPF potentiates the growth of haematopoietic cells. It exhibits immune control and haematopoietic control functions.
                                                                                                                                       Human haematopoietic cell growth potentiating factor; immune control; haematopoietic control functions; immunodeficient diseases;

The gene was isolated from a proliferating B lymphocyte cDNA library with primers AAT17150-1. The resulting fragment (600 bp) was cloned into pUC118.

The human gene was used to isolate the gene encoding the mouse guanylate kinase gene (AAT17149). These proteins were fused to as the hear-His/thrombin cleavage site peptide sequence for ease of purification. The human and mouse guanylate kinase gene can be used to construct dual expression vectors contg. the human or mouse sequences and novel Herspes simplex virus (HSV) type-1 thymidine kinase mutants (AAT05187-91) which contain mutations in the region encoding residues 165-175. Vectors contg. the mutant and normal kinase sequences can be

DHAM-kinases used in the invention include guanylate kinase I (GUKI), serin-threonin-kinase PAK2 and serin-threonin-kinase PRK2. The method of the invention is useful for identifying substances that influence inflammatory conditions of chronic inflammatory airway diseases (e.g. chronic bronchitis or chronic obstructive pulmonary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Determining activators or inhibitors of 'deregulated in hyperactive macrophage' (DHAM)-kinase for treating chronic inflammatory airway diseases, by measuring DHAM-kinase function after it is contacted with

Patent No. 5679571

GENERAL INFORMATION:
FITLE OF INVENTION: Recombinant D-Hydantoinase, A Process For the TITLE OF INVENTION: Production and Use
TITLE OF INVENTION: Production and Use

NUMBER OF SEQUENCES: 4

CORRESPONDENCE ADDRESS:
ADDRESSEE: Felfe & Lynch
STREET: 805 Third Avenue
CITY: New York City
STATE: New York
STATE: New York
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

Sequence 2, Application US/09767215

Patent No. US20020081636A1

GENERAL INFORMATION:
TITLE OF INVENTION: NOVEL MOLECULES OF THE CARD-RELATED

TITLE OF INVENTION: PROTEIN FAMILY AND USES THEREOF

FILE REPERENCE: 07334-142001

CURRENT APPLICATION NUMBER: US/09/767,215

CURRENT FILING DATE: 2001-01-22

PRIOR PELLING DATE: 2000-02-09
                                                                                                                                                                                                                                                                                                                                                                                                        100.0%; Score 930; DB 10; Length 100.0%; Pred. Patent No. US20020160438A1
GENERAL INFORMATION:
APPLICANT: Boehringer Ingelheim Pharma KG
TITLE OF INVENTION: Method for identifying compounds which positively
TITLE OF INVENTION: influence inflammatory conditions
FILE REFERENCE: 1/1177
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 98, Application US/09919497
Patent No. US20020106662A1
GENERAL INFORMATION:
APPLICANT: Mutter, George L.
TITLE OF INVENTION: PROGNOSTIC CLASSIFICATION OF ENDOMETRIAL CANCER FILE REFERENCE: B0801/7225
CURRENT APPLICATION NUMBER: US/09/919,497
CURRENT PAPLICATION NUMBER: US 60/221,735

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

146236

tight junction protein - dog (fragment)

C;Species: Canis lupus familiaris (dog)

C;Species: 14-Feb-1997 #Sequence_revision 14-Feb-1997 #text_change 16-Dec-1998

C;Accession: 146236

R;Jesaitis, L.A.; Goodenough, D.A.

J. Cell Biol. 124, 949-961, 1994

A;Title: Molecular characterization and tissue distribution of 20-2, a tight junction
A;Molecule type: nucleic acid
A;Residues: 1-1745 <170>
A;Cross-references: GB:D14340; NID:g303709; PIDN:BAA03274.1; PID:d1003784; PID:g30371

SUBCELLULAR LOCATION: Cytoplasmic.

SUBCELLULAR LOCATION: Cytoplasmic.

TISSUE SPECIFICITY: Detected in adult peripheral blood leukocytes, trysues, spleen and liver. Also found in promyelocytic leukemia HL-60 cells, chronic myelogenous leukemia K562 cells, Burkitt's alymphoma Raji cells and colorectal adenocarcinoma SW480 cells. Not SIMILARITY: CONTAINS 1 CARD DOMAIN.

SIMILARITY: CONTAINS 1 CARD DOMAIN.

SIMILARITY: CONTAINS 1 GUANYLATE KINASE-LIKE DOMAIN.

SIMILARITY: CONTAINS 1 GUANYLATE KINASE-LIKE DOMAIN.

Caspase recruitment domain protein 10 (Bcl10-interacting MAGUK protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         942 IRGLIGRPGWRDSELLRQCRGSEQWLWGLPCSWVQVPAHAWGHAEELAKVVRGRILQEQA 1001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 interaction. They both participate in a complex with MALT1, where MALT1 binds to Bcl10.
--- TISSUE SPECIFICITY: Highly expressed in kidney, heart followed by brain, lung, liver, skeletal muscle and testis.
--- SIMILARITY: CONTAINS I CARD DOWAIN.
--- CAUTION: Supposed to contain a SH3, a PDZ and a guanylate kinase-like domain. But none of these 3 domains are detected by PROSITE,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         834 RPVVLLPECLAPRLIRNLLDLPSSRLDFQVCPAESLSGEEQCTSSAPGAPKAWPATAGL- 892

                                                                                                                                                                                                                             interaction. They both participate in a complex with MALT1, where MALT1 binds to BOL10 (By similarity).
SUBCELLUIAR LOCATION: Cytoplasmic (By similarity).
TISSUE SPECIFICITY: Detected in adult heart, kidney and liver:
Inower levels in intestine, placenta, muscle and lung. Also found in fetal lung, liver and kidney.
SIMILARITY: CONTAINS 1 CARD DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     59 CWVTRHAVESLMEKNTHALLDVQLDSVCTLHRMDIFPIVIHVSVNEKMAKKLKKGLQRLG 118

"Guanylate kinase from bovine retina: isolation, primary structure,
and expression in E. coli.",
and expression. E. coli.",
-!- FUNCTION: ESSENTIAL FOR RECYCLING GMP AND INDIRECTLY, CGMP.
-!- CAPALYTIC ACTIVITY: ATP + GMP = ADP + GDP.
-!- SUBUNIT: MONOMER (BY SIMILARITY).
-!- SIMILARITY: BELONGS TO THE GUANYLATE KINASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Homo sapiens (Human).

                                                                                                                                                                                                                                                                                                                                               MICHT BE INVOLVED IN STABLLIZING JUNCTIONS. THE ALFHA DOMAIN MICHT BE INVOLVED IN STABLLIZING JUNCTIONS.
SUBCELLIANT LOCATION: PERIPHERAL MEMBRARE. CYTOPLASMIC SIDE.
MOVEMENT OF 20-1 FROM THE CYTOPLASM TO MEMBRANE IS AN EARLY EVENT OCCURRING CONCURRENTLY WITH CELL-CELL CONTACT.
SHORT FORM; ARE PRODUCTS: 2 ISOFORMS; A LONG FORM (SHOWN HERE) AND A SHORT FORM; ARE PRODUCTS: 3 ISOFORMS; A LONG FORM (SHOWN HERE) AND A SHORT FORM; ARE PRODUCTS. THE SHPHA-CONTAINING ISOFORM IS FOUND IN MOST TESSUE SPECIFICITY: THE ALPHA-CONTAINING ISOFORM IS FOUND BOTH IN ENDOTHELIAL CELL JUNCTIONS. THE SHORT ISOFORM IS FOUND BOTH IN ENDOTHELIAL CELLS AND THE HIGHLY SPECIALIZED EPITHELIAL JUNCTIONS.
PTM: PHOSPHORYLATED.
                                                                                                                                                                                                                                                                        SIMILARITY: CONTAINS 3 PDZ/DHR DOMAINS.
SIMILARITY: CONTAINS 1 SH3 DOMAIN.
SIMILARITY: CONTAINS 1 GUANYLATE KINASE-LIKE DOMAIN.
SIMILARITY: BELONGS TO THE MAGUK FAMILY OF CELL JUNCTION PROTEINS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              LHRMDIFPIVIHVSVNEKM-------AKKLKKGLQRLGTSEEQLLEAARQE 131
